sidux e.V.

Gründung am 01. April 2007

Gemeinnütziger, steuerbefreiter Verein
Registergericht: Berlin Charlottenburg
Geschäftsstelle: Aachen

Ziele:
Förderung Freier Software und damit im
Zusammenhang stehende Projekte.

Aktivitäten:
Eigenveranstaltungen als Vortragsreihen,
Workshops, deutschlandweiten Anwender-
Treffen und Gastvorträge bei verschiedenen
Veranstaltungen.

Teilnahme an verschiedenen FOSS
Veranstaltungen, u.A. SIGINT Köln, FrOSCon,
OpenRheinRuhr, Software Freedom Day, Open
Xchange Partner Summit.

Kooperationen mit verschiedenen FOSS
Projekten.

Semplice-Linux project

Not the usual Debian remix, since 2009.

Debian is awesome: Everybody can modify, improve and remix it to fit their needs. It is a great basis for a fast, lightweight and clean distribution. This is the aim of Semplice-Linux, which is build on Debian sid to be always on the edge.

Designed to be lightning fast on modern 64-bit machines as well on old glories, requiring only a 486 (or better) cpu and 384 MB of RAM. To provide this fast environment the distribution based on Openbox and a set of lightweight applications.

Semplice-Linux is built using only official Debian staff, with an stable framework to ensure the same working environment across all builds. It is compiled according to the Debian Policy and every modification to the base system is available in our repositories. It is possible to get the same Semplice-Linux system by simply starting from a basic Debian bootstrap.

We strongly believe in FOSS. Semplice-Linux includes non-free firmware to support a wide variety of boxes. To encourage you to live

without non-free software we make it easy to remove them. See http://semplice-linux.org/doku/semplice:nonfree#installed_system for more information.

Semplice-Linux provides a base working system for everything a common user needs:
* A word processor (Abiword)
* A spreadsheet (Gnumeric)
* A music player (Exaile)
* A web browser (Chromium)

It also includes the Synaptic Package Manager which lets you install the 38,000 packages that Debian offers!
